

Factors affecting the genotypic and genetic diversity of the dioecious clonal
plant *Cirsium arvense* at the metapopulation level

Dissertation

zur Erlangung des akademischen Grades

doctor rerum naturalium (Dr. rer. nat.)

vorgelegt der

Mathematisch-Naturwissenschaftlich-Technischen Fakultät
(Fachbereich Biologie)
der Martin-Luther-Universität Halle-Wittenberg

von Frau Magali Solé

geb. am: 13.08.1975 in: Maubeuge (Frankreich)

Gutachterin bzw. Gutachter:

1. Prof. Dr. habil. Roland Brandl, Philipps-Universität Marburg
2. Prof. Dr. habil. Isabell Hensen, Universität Halle-Wittenberg
3. Prof. Dr. habil. Birgit Ziegenhagen, Philipps-Universität Marburg

Halle an der Saale, 16.12.2003 (Tag der öffentlichen Verteidigung)

Acknowledgements

Many people have provided me with assistance, guidance and support during the time it has taken me to complete this PhD. Now, I would like to take time to acknowledge them.

I would like to thank Pr. Dr. habil. Roland Brandl, Pr. Dr. habil. Isabell Hensen and Pr. Dr. habil. Birgit Ziegenhagen for giving expert advice on my PhD and for accepting reviewing this work.

I am especially grateful to Prof. Dr. habil. Roland Brandl, the supervisor of this study, and to Dr. Sabine Eber who both originally suggested this subject. The study of the system “*Urophora cardui* – *Cirsium arvense*” is of long tradition at the University of Bayreuth. I am very grateful to Sabine and Roland for having introduced me to this system. I was pleased to continue their previous work and to benefit from their knowledge and experiences. I thank them for the nice field work we had in Bavaria, and for their many helps, constructive criticisms and interest. I am especially grateful to Prof. Dr. habil. Roland Brandl for having let me develop my own research on the plant aspect.

This PhD was carried out at the UFZ - Umweltforschungszentrum Leipzig-Halle. I wish to thank Dr. Stefan Klotz, who welcomed me in the Department of Community Ecology.

The greatest and most enduring presence was that of Dr. Walter Durka. He has played an important role during the course of this PhD and I would like to thank him. I have learned various things from Walter, such as the way of proceeding research and resolving all kind of problems at all scales: “from molecular to computers”. I am very grateful for many precious comments and stimulating discussions we had.

I express my warmest gratitude to my three German “Muttis”: Antje, Ina and Martina. I thank them for their good mood, for the nice working atmosphere in the lab and for the numerous unconventional (but best) German lessons I had.

I would like to acknowledge Dr. Yves Piquot for numerous motivating discussions, guidance and precious literature advices on clonal plants and life-history-traits.

I also thank Dr. Harald Auge and Dr. Dani Prati for their relevant advices in statistics and for having provided me the basic literature about clonal plants.

Many thanks also to all my colleagues for their sympathy, which makes the work at the “Biozoenoseforschung” very pleasant!

Finally, I am forever grateful to my parents for their understanding, endless patience and encouragement when it was most required. I acknowledge them for having let me find my way and for always having accepted and supported my choices (merci).

Table of contents

	General Introduction	7
Chapter I	Genotypic and genetic diversity of the common weed <i>Cirsium arvense</i> (Asteraceae) With Walter Durka, Sabine Eber & Roland Brandl	22
Chapter II	Does history of parasitism by <i>Urophora cardui</i> influence the genotypic and genetic diversity of <i>Cirsium arvense</i> ? With Walter Durka, Sabine Eber & Roland Brandl	40
Chapter III	Environmental study of reproductive and dispersal efforts of the common weed <i>Cirsium arvense</i> on a metapopulation level With Yves Piquot, Walter Durka, Roland Brandl	53
	Discussion and Outline	73
	Summary	81
	Zusammenfassung	82
	Curriculum vitae	83
Appendix	AFLP: Principle and Application	84
